

Being in Control of Organizational Changes

Your organisation changes continuously. People join, leave and move to other departments. When managing the organisation's market data inventory, updating these organizational changes may cause a significant workload. **INFOmatch** incorporates useful functionality such as "drag and drop", when manually controlling these events. In addition, the system offers powerful interfacing facilities.

Many organisations use Microsoft's Active Directory. A central component of the Windows platform, Active Directory provides the means to manage the identities and relationships that make up network environments. With the INFOmatch Active Directory interface all organizational data in INFOmatch is automatically synchronized with Active Directory, including hierarchy.

Business benefits

- Full synchronization of HR data kept in Active Directory, including organization entities and hierarchy
- Automatic identification of any change, such as movers, joiners and leavers
- Supports automatic field mapping and import of non-default fields, thereby creating user defined fields
- Full automation by scheduling the synchronization process
- Avoids double manual entry and saves time

INFOmatch is an innovative cost & contract management system and is used by firms in the investment management, banking, energy and commodity business around the globe. It is designed by market data specialists, who have more than 20 years of international experience, including more than 480 dealing room assignments. INFOmatch is a leading reporting and analytical market data system because of easy navigation, handling and storage of historical data and tremendous reporting facilities.

The result: the new dimension of control!
