

# Being in Control of Thomson Reuters Permissionings

Permissioning or authorising market data users is a primary process in managing market data. Thomson Reuters DACS is the world's leading market data permissioning system. DACS holds all user profiles of your Thomson Reuters data user community, including real-time accesses to data from exchanges and specialist data providers. These profiles are subject to changes, such as joiners, leavers and changes in the profiles.

The **INFOmatch** Entitlements interface for Thomson Reuters DACS synchronizes the Thomson Reuters profiles in INFOmatch and DACS. It allows for pulling in permissioning data from DACS into INFOmatch and fully supports Thomson Reuters' compliance rules. Your market data administration automatically matches with Thomson Reuters' data profiles.

DACS Product	IM Component Description	IM Component ID	IM Vendor	IM Contract	DACS Typ
✓ ASE	American Stock Exchange	ASE	Reuters	RT 23458-001	Fee
